Lillington, North Carolina 27546

Re: Site Study - Proposed Harnett County Municipal Solid Waste Landfill

Mr. Blanchard:

The Division of Solid Waste Management, Solid Waste Section (Section) has completed the initial review of the above referenced project. The following items must be provided or addressed in order to continue the review process. Additional information and revisions to the Site Study must be made in accordance with 15A NCAC 13B .1603(b).

.1618(c)(1) Regional Characterization

The Section has no comments regarding the Regional Characterization at this time.

.1618(c)(2) Local Characterization

What investigations were made to determine if any CERCLIS, State Superfund, National Priority List, RCRIS Notifiers, Registered Storage Tank, Leaking Registered Storage Tank sites, or other potential sources of contamination are located within the local area?

Overall, this initial review finds that the Site Study contains an excellent presentation and summary of Regional and Local conditions.

.1618(c)(3) Site Hydrogeologic Report

Please refer to the attached hydrogeologic review memorandum from Mr. Bobby Lutfy to Bill Sessoms, dated December 1, 1995.

.1618(c)(4) Location Restrictions

.1622(3) Indicate on plan sheet C-3 areas that have been approved for fill by the Division of Environmental Management and the U.S. Army Corps of Engineers. In addition, are any mitigative efforts planned to achieve no net loss of wetlands?

Documentation for compliance with the other rules contained in Section .1622 is well presented. There are no other comments regarding Location Restrictions at this time with the

exception that unstable areas [.1622(6)] should be further examined at the time of preparation of the Permit to Construct Application.

.1618(c)(5) Local Government Approvals

Plot on appropriate plan sheet the currently approved disposal area or provide copy of plan that shows approved disposal areas. The proposed lined unit should be plotted on the same plan (of the existing permitted disposal area) to insure that the proposed disposal unit complies with .1618(d)(2).

.1618(c)(6) Proposed Facility Plan

Discuss in the facility report, and indicate on sheet C-3, the additional borrow areas currently under review by Bobby Lutfy.

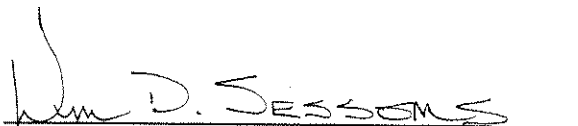

The Section assumes that the proposed wetlands remediation area indicated on sheet C-3 is for the proposed leachate treatment. Any preliminary areas that can be anticipated for use and further delineated should be indicated on this plan sheet. The Section understands that the final configuration will be determined during the Permit to Construct phase.

Overall, the Facility Plan report is generally well developed and presented.

The Section reserves the right to request additional information during the continuing review. If such additional information is required, you will be notified by the Section.

Should you have any questions or if we can provide any assistance, please contact the Section at (919) 733-0692 extension 266 (email: sessomswd@wastenot.ehnr.state.nc.us).

Thank you,
